DETAILED ACTION

1. Applicant's amendment and accompanying remarks filed June 18, 2004 have been acknowledged.
2. Examiner acknowledges cancelled claims 4-10.
3. Examiner acknowledges newly added claims 11-24.
4. The rejection of claims 4-10 under 35 U.S.C. 102(b) as being anticipated by Wolk et al., U.S. Patent Number 6,114,088 is rendered moot due to applicant's cancellation of claims 4-10.

Double Patenting

5. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

6. Claims 11-24 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-7 of copending Application No. 10/323,331. Although the conflicting claims are not identical, they are not patentably distinct from each other because both applications claim a transfer member having at least a supporting member and a light emitting layer formed peelably on the supporting member wherein a bonding property improving substance is included in a layer of the transfer member to be contacted with a member to be transferred. The instant application does not provide for a manufacturing method using the transfer member. The use of a transfer member in a manufacturing method can produce a high quality organic EL element. Therefore, it would have been obvious to one of ordinary skill in the art to have a manufacturing method using a transfer member in order to have an organic EL element that has advantages such as wide view angle, capability of low voltage drive and high luminance.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Response to Arguments

7. Applicant's arguments with respect to claims 4-10 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 1774

8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a).

Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
